

THE PRODUCT

Exam results in 1–2 days, not weeks.

GradingAI Co-Pilot reads your students' handwritten answer papers, applies the marking rubric, and suggests scores with the reason shown. Your teachers simply review and approve.

From 20–25 min to ~2–3 min

~90% less

of teacher review per script — the teacher stays

1–2 days to declare results

1–2 days

vs the 3–4 week cycles most campuses run

Zero new hardware

0 new apps

works with the ADF scanners and ERP your

THE PROBLEM

Manual correction is slow, costly and error-prone.

A typical 1,000-student campus evaluating ~72,000 scripts a year spends ₹18-25 Lakh on transport, vaulting, masking and examiner allowances — and results still take 3-4 weeks.

₹18-25 Lakh a year

₹18-25 Lakh

spent on printing, transport, secure storage and

3-4 week result cycles

3-4 wks

delay admissions, scholarships and re-

Mistakes erode trust

3.4 L

~3.4 lakh CBSE re-verifications filed yearly; 8-

THE PROBLEM

Why the last generation of on-screen marking failed.

Legacy on-screen marking forced teachers to sit and draw every tick with a mouse or stylus — more work, zero intelligence. It was an expensive PDF viewer.

No intelligence

0 AI

no rubric check, no suggested scores, no

More work, screen fatigue

Slow

teachers ended up slower than correcting on

Costly new hardware

₹

required proprietary scanners and IT overhead

THE SOLUTION

90% AI pre-grading + 1-click teacher verification.

The AI reads messy handwriting, checks each answer against the rubric, places green ticks and red crosses on the exact lines, and suggests a score — your teacher verifies in seconds.

~90% less teacher time

~90%

from ~20–25 minutes to ~2–3 minutes per

5–10 seconds per page

1 click

teachers review, override and press Approve &

Teacher always wins

Oversight

every final mark is a teacher decision, recorded

HOW IT WORKS

Three steps, using hardware you already own.

No new scanners, no new student app, no IT project. From stacked paper to verified marks in days.

1. Scan

ADF

QR-coded booklets run through your existing ADF scanner. Student names are masked

2. AI pre-grades

AI

handwriting OCR + vision model applies the rubric, annotates and suggests scores with

3. Teacher verifies

Sign-off

review in ~2-3 minutes per script, override any mark, sign off. The pen trail is permanent.

PRODUCT

The Evaluator Canvas — built for real exam rooms.

Every suggested mark carries a visible reason. Independent evaluations put AI-human agreement at ~95% on descriptive answers — and higher once teachers calibrate the rubric on a sample.

Rubric reasoning, always visible

~95%

each score links to the rubric line it matched —

Rapid keyboard workflow

Hotkeys

Enter to approve, Tab to override, Ctrl+Z to undo

Double-blind masking

Blind

QR-decoded roll numbers keep evaluation free

COMPLIANCE

Court-compliant, auditable by design.

On sign-off, every vector tick and correction is flattened permanently into the PDF — a physical-equivalent record for re-evaluation disputes and legal review.

Permanent audit trail

Audit

vector pen marks rendered into the PDF at sign-

AP/TS aligned

Legal

regional jurisprudence for auditable evaluation

Dual evaluation

Fair

>15% score deltas auto-routed to a senior third

THE DIFFERENTIATOR

A mark is not feedback. This is.

Every corrected paper becomes a personal diagnostic report — concept mastery, error type, and exactly what to study next. Students ignore static downloads, so we link to videos and practice.

Concept mastery bars

Mastery

which micro-topics are strong and which are

Timestamped video lessons

Videos

a 5-minute clip on the exact sub-topic failed,

Auto practice sheet

PDF

a 3-question remedial PDF built from their weak

INTEGRATION

Zero-friction campus integration.

Fits your existing technology stack without new hardware, new logins, or a new student app.

Existing ADF scanners

Scan

Canon, Fujitsu, Epson via standard TWAIN/WIA

Plugs into your ERP

ERP

marks and feedback sync to MyCamu, Entab,

Students keep their app

0 apps

diagnostic reports appear in the campus app

PRICING

Honest, per-student pricing.

Per enrolled student, per month, billed per academic year — so it scales naturally with your total student strength.
No surprise setup fees.

Schools

₹75–100

₹75–100 per student, per month.

Colleges / Universities

₹100–150

₹100–150 per student, per month — COE

Volume pricing

Scaled

the per-student rate drops as total enrolment

ROI

The real return is teacher hours.

A 72,000-script campus returns ~20,400 teacher hours a year — about 128 teacher-months back to teaching — while declaring results in 1–2 days.
